Top right: Adult rat brain membrane immunoblot.

Middle: Immunoblots on membranes prepared from whole mouse (MBM) and rat (RBM) brain, and from human cerebellum [HBM(Cb)], cerebral cortex [HBM(Cx)], and hippocampus [HBM(H)].

Bottom. Right: Adult rat hippocampus immunohistochemistry. Left: Electron micrograph shows N75/33 immunolabelling in the *stratum radiatum* of mouse hippocampal CA1 using a pre-embedding immunogold method. Immunogold particles were observed at postsynaptic sites (arrows) along the extrasynaptic plasma membrane of dendritic spines (s) and shafts (Den) of pyramidal cells establishing synaptic contacts with excitatory axon terminals (b). 80.000 X.
